Hard Work and Dedication: Our Engineers Continue to Drive Business Growth

Hello,

Our company continues to grow, and we are excited to be able to offer our [Civil Engineering](#) and [Dry Utility](#) services to clients across the United States. Our recent growth and success is a tribute to the hard work and dedication that our engineers put into every project. We continue to put our customers first, and have recently completed several exciting projects.

We are pleased to announce that we recently completed work on one of the largest automotive service centers and parking structures in North America, the [House of Imports Mercedes-Benz](#) in Buena Park, CA. Despite several design limitations, CDR delivered a cost-effective solution that provided underground stormwater storage and infiltration for over 4 acres of impervious surface. To learn more about this project, check out our recent [case study](#).

Land development projects must conquer numerous hurdles before they cross the finish line. Many of these hurdles come in the form of permits and planning, long before the first shovel breaks ground. In our recent technical blog post, we dive into three reasons using [expert planning and permitting services](#) will streamline your project's success right from the start.

At CDR we take great effort to inspire our engineers by supporting career development and offering fun team building opportunities. In turn, we have cultivated an amazing group of talented and dedicated people. This quarter, CDR would like to recognize [Arely Ocampo](#), one of our associate engineers. Arely's design expertise is not limited to creating precise grading plans; rumor has it that she also designs delicious charcuterie boards in her off hours!

As always, please [reach out](#) with any of your civil engineering needs.

Regards,

Aaron M. Albertson, P.E., SCDP

Meet Arely Ocampo

Arely was born and raised in Costa Mesa along with her three younger siblings, and she is thrilled to be working and making improvements in the city she grew up in. She has strong family roots, and makes an effort to stay connected with her culture by visiting her parents' neighboring pueblos at least once a year.
